

Wealth Conduit

Sacred Revenue Integration Pipeline

Orchestrates sponsor flows from PayPal, GitHub Sponsors, and Patreon into verified treasury records with automated crest assignment and Discord notifications.

Architecture Overview

Quick Start

Prerequisites

- Node.js 18+
- GitHub Personal Access Token (with repo write access)
- Discord Webhook URL
- PayPal IPN configuration
- GitHub Sponsors webhook secret

Installation

```
bash
```

Clone repository

`git` clone <https://github.com/Kypria-LLC/wealth-conduit.git>

`cd` wealth-conduit

Install dependencies

`npm install`

Configure environment

`cp .env.example .env`

Edit .env with your secrets

Build

`npm run build`

Run tests

`npm test`

Start development server

`npm run dev`

Deploy to production

`npm run deploy`

Configuration

Environment Variables

env

```
# PayPal Configuration
PAYPAL_WEBHOOK_ID=your_webhook_id
PAYPAL_RECEIVER_EMAIL=your@paypal.email
PAYPAL_ENV=production # or 'sandbox'

# GitHub Configuration
GITHUB_TOKEN=ghp_your_personal_access_token
GITHUB_WEBHOOK_SECRET=your_webhook_secret
GITHUB_ORG=Kypria-LLC
CREST_VAULT_REPO=crest-vault

# Discord Configuration
DISCORD_WEBHOOK_URL=https://discord.com/api/webhooks/...

# Patreon Configuration (optional)
PATREON_ACCESS_TOKEN=your_patreon_token
PATREON_WEBHOOK_SECRET=your_webhook_secret

# Event Bus (optional - defaults to in-memory)
REDIS_URL=redis://localhost:6379

# Server Configuration
PORT=3000
NODE_ENV=production
LOG_LEVEL=info
```

Tier Mapping

Edit `config/tier-mapping.json` to customize sponsorship tiers:

```
json
```

```
{
  "paypal": {
    "tiers": [
      {
        "name": "Bronze Patron",
        "threshold": 5,
        "color": "#CD7F32",
        "badgeUrl": "https://..."
      }
    ]
  }
}
```

API Reference

Process Webhook Event

typescript

POST /webhook/paypal
POST /webhook/github
POST /webhook/patreon

// Example: PayPal IPN

```
curl -X POST http://localhost:3000/webhook/paypal \
  -H "Content-Type: application/x-www-form-urlencoded" \
  -d "payment_status=Completed&payer_email=sponsor@example.com&mc_gross=50"
```

Health Check

typescript

GET /health

```
Response: {
  "status": "healthy",
  "version": "1.0.0",
  "uptime": 86400
}
```

Testing

Unit Tests

```
bash  
npm test
```

Integration Tests

```
bash  
npm run test:integration
```

Send Test Event

```
bash  
./scripts/test-event.sh paypal 50 sponsor@example.com
```

Monitoring

Logs

```
bash  
  
# Production logs  
journalctl -u wealth-conduit -f  
  
# Development logs  
npm run dev # Auto-logs to console
```

Metrics

- Event processing time
 - Verification success rate
 - Crest assignment success rate
 - Discord notification delivery rate
-

Deployment

Systemd Service

```
ini

# /etc/systemd/system/wealth-conduit.service
[Unit]
Description=Wealth Conduit - Sacred Revenue Pipeline
After=network.target

[Service]
Type=simple
User=kypria
WorkingDirectory=/opt/kypria/wealth-conduit
ExecStart=/usr/bin/node dist/index.js
Restart=always
RestartSec=10
Environment=NODE_ENV=production

[Install]
WantedBy=multi-user.target
```

Deploy Script

```
bash

./scripts/deploy.sh
```

Troubleshooting

Webhook Not Receiving Events

1. Check firewall rules
2. Verify webhook URL is publicly accessible
3. Confirm webhook secret matches configuration

Verification Failures

1. Check PayPal receiver email matches `.env`
2. Verify GitHub webhook secret is correct
3. Review audit logs for signature mismatches

Crest Assignment Failures

1. Verify GitHub token has repo write permissions
 2. Check `crest-vault` repository exists and is accessible
 3. Review tier mapping configuration
-

Security

- All webhooks require signature verification
 - Secrets stored in environment variables only
 - Audit logging for all transactions
 - Rate limiting enabled (100 req/min per IP)
 - No sensitive data in logs
